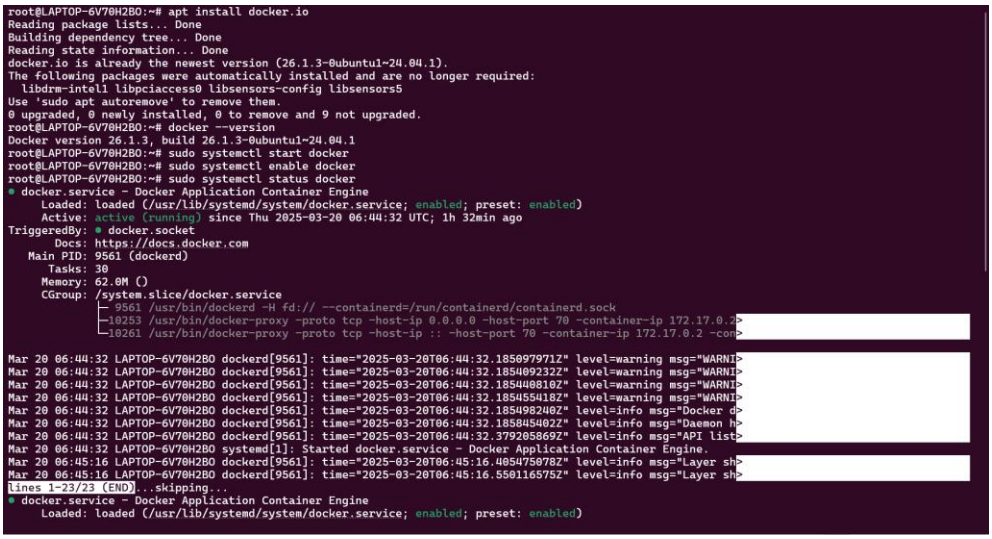
DEVOPS TASK- 2

1) Installation of Docker:

CODE :

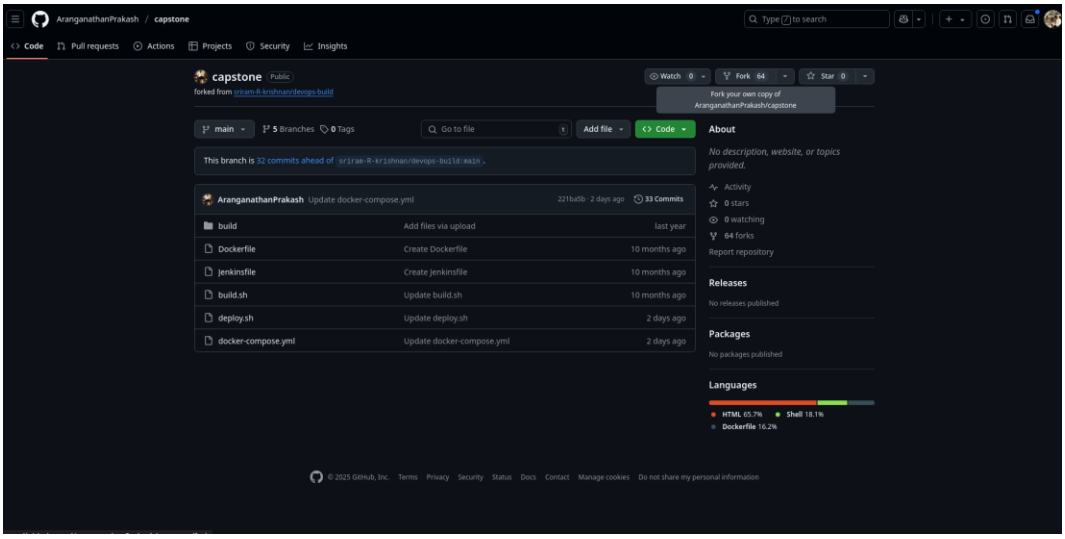
sudo apt install docker.io
Docker –version
sudo systemctl start docker
sudo systemctl enable docker
sudo systemctl status docker

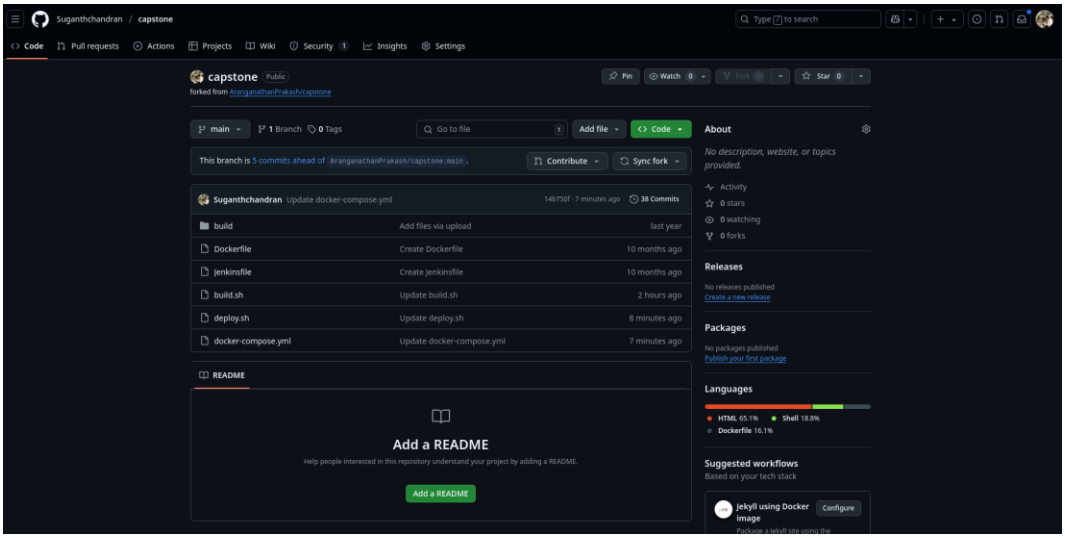
SCREENSHOT:



2) Fork a copy of a GitHub repo which contains the necessary files which will result in the clone of that repo in our own repository

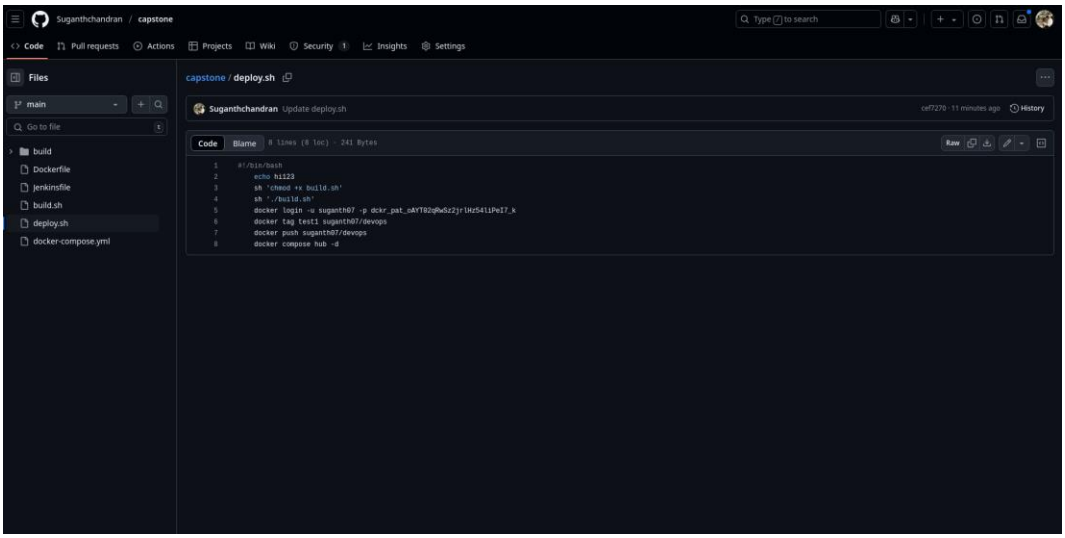
SCREENSHOT :





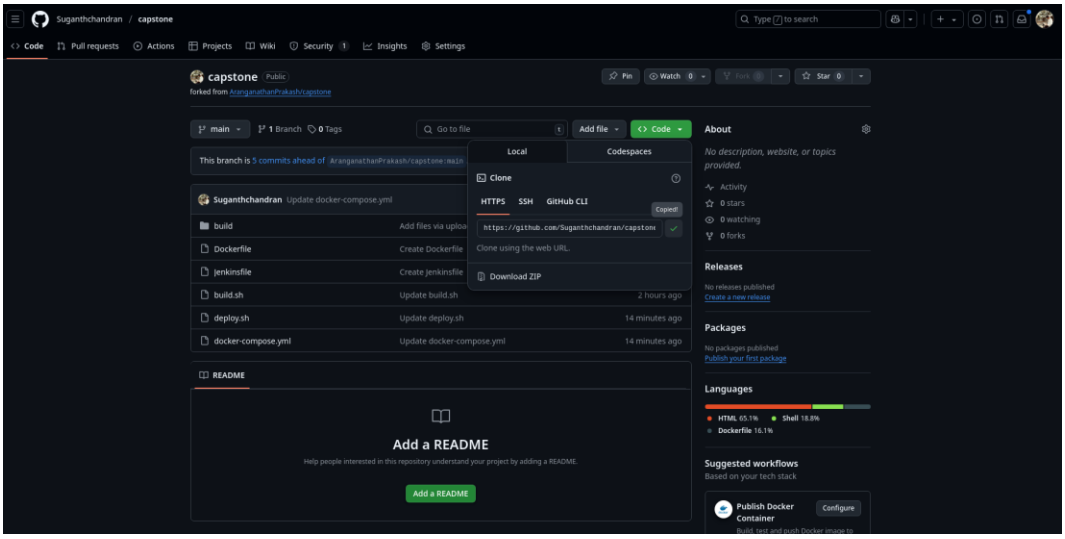
3) Then change the token and repo name of the docker Hub in the deploy.sh file which is in our repository.

SCREENSHOT :



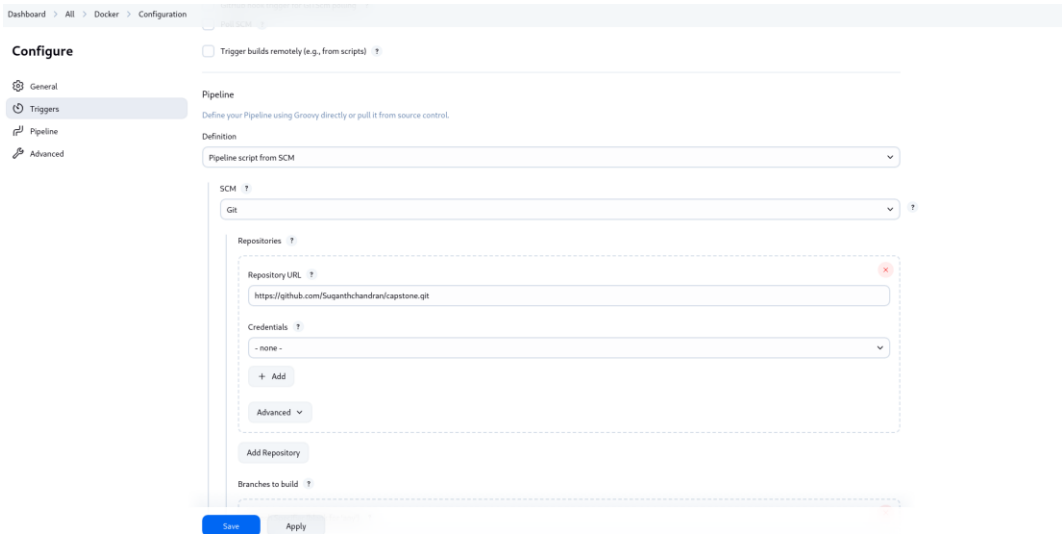
4) Then copy the GitHub link of the repository and go to Jenkins.

SCREENSHOT:



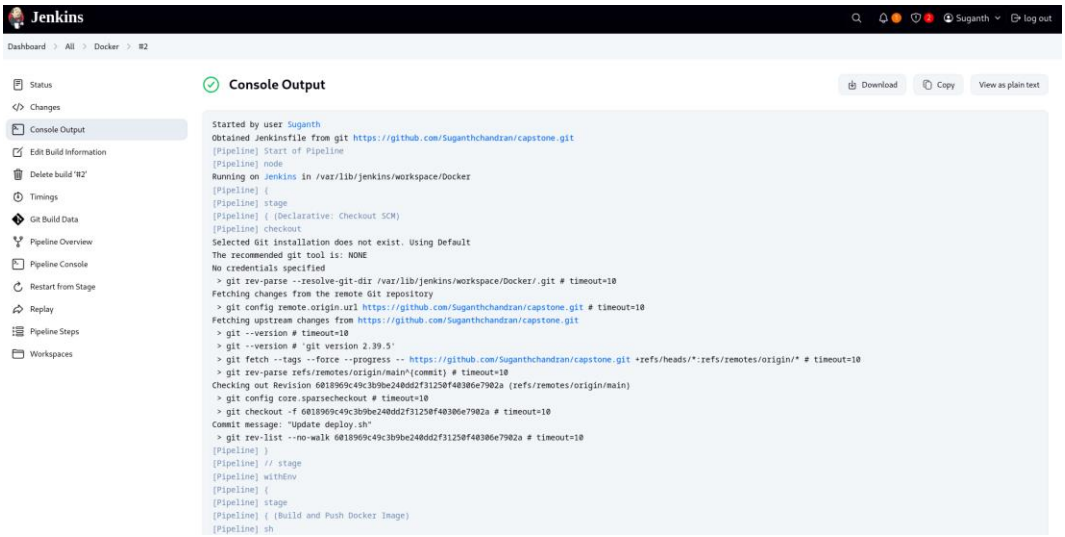
5) In Jenkins, create a new item (Job) with a type pipeline and add the copied GitHub url to it with the correct branch and Jenkinsfile.

SCREENSHOT:



6) After Creating the job, build it and it will give the console output and the docker image will be created.

SCREENSHOT:



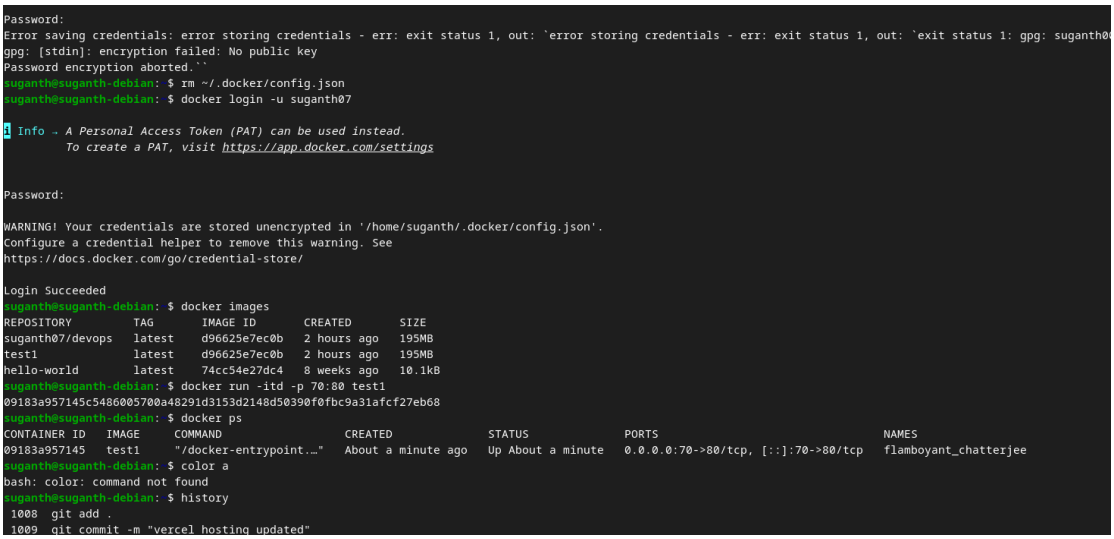
7) Now Built this docker image in the terminal with desired port number to it.

CODE:

docker images

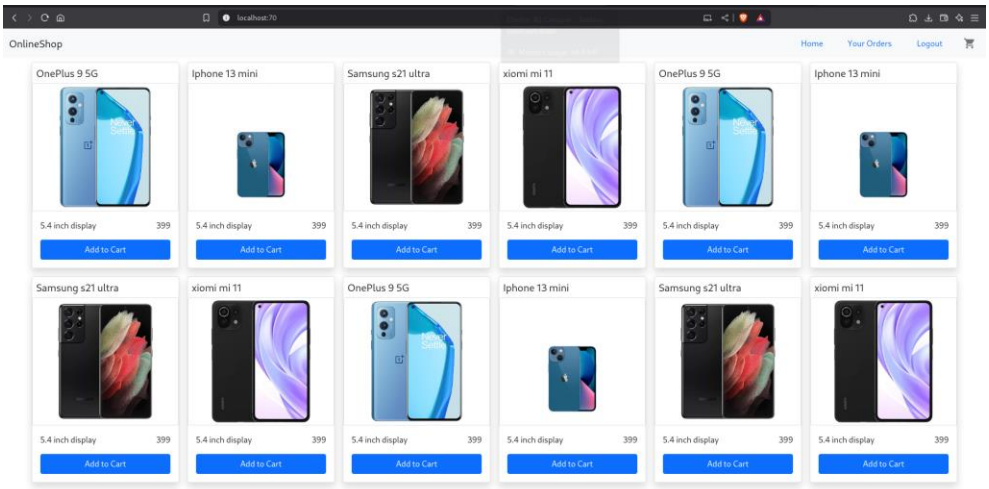
docker run –itd –p 70:80 test1

SCREENSHOT:



8) Go to the Browser and search for localhost:<PORT_NUMBER> and the respective application will be hosted.

SCREENSHOT:

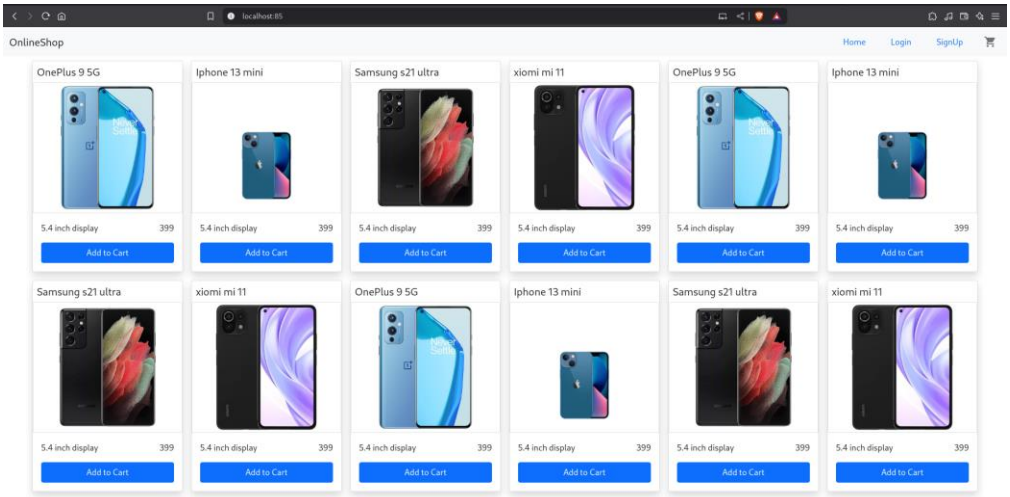


9) But, Instead of running the image by manually , we can also write the command for running in a file called docker-compose.yml

CODE:

```
version: '3'
services:
 react-capstone:
  image: "test1"
  ports:
   - "85:80"
```

SCREENSHOT:

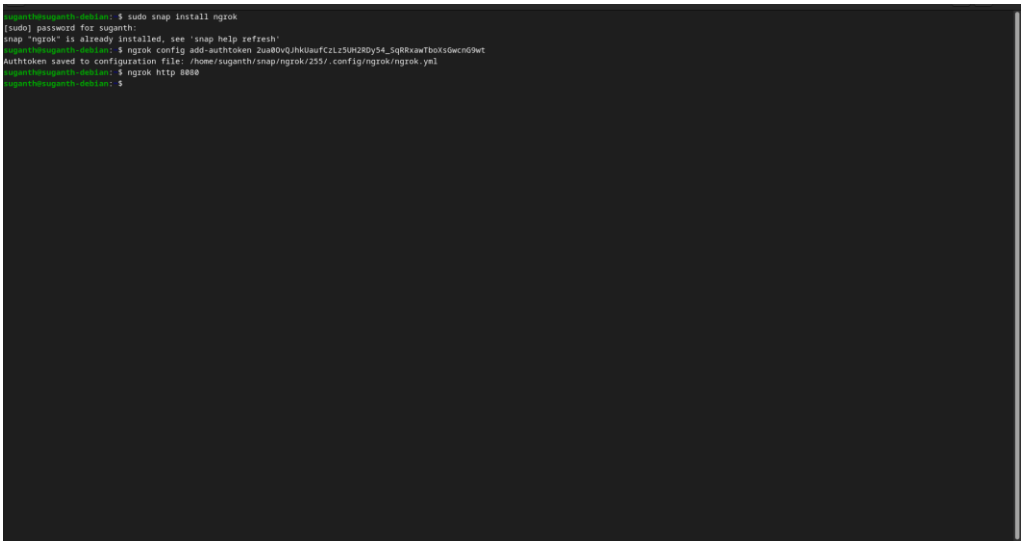


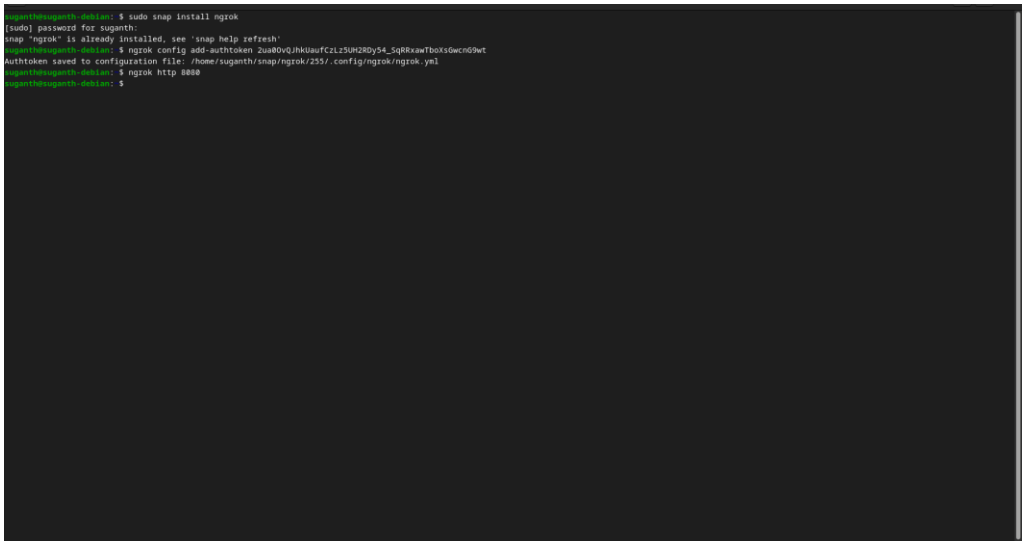
By Creating this, we no need to run the image by manually. (It will automatically run)

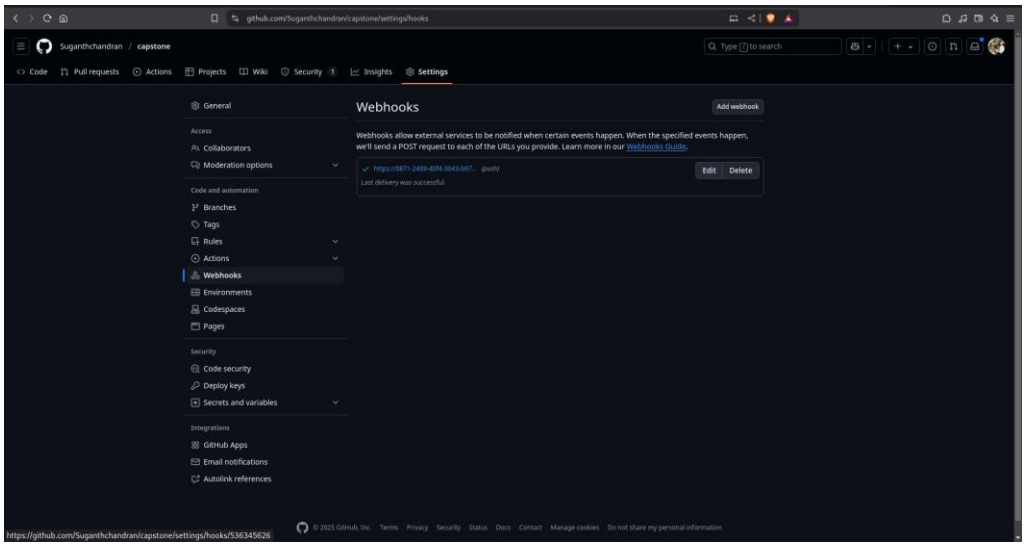
10) Adding Webhook to it which is available in GitHub for automatic build of the project.

Installing ngrok and with these command to get the Webhook Link.

SCREENSHOT:







11) Tick the checkbox of GitHub hook trigger for GITScm polling in Jenkins.

SCREENSHOT :
